

SPANDREL GLASS REPLACEMENT

ELGIN, IL

PROJECT HIGHLIGHTS:

Clarion went the extra mile to provide quality service. Our Service Division was tasked with replacing a unique spandrel glass window that featured a two-panel design—one panel clear and the other tinted black. The original manufacturer was listed, but the specific tint color combination was not recorded, requiring our team to source an exact match to maintain the building's aesthetic.

Clarion located the original glazing supplier and coordinated the ordering of sample panels. The client reviewed the samples to select the best tint match for the replacement glass. Our Service Division completed the installation of the spandrel glass entirely in-house, managing each step from sourcing to installation.

Despite the challenges in matching the specialty tint, our team's dedicated approach delivered a seamless glass replacement that preserved the building's original look. This project showcases our commitment to quality and client satisfaction through careful planning, vendor collaboration, and precision installation.
