

COMMERCIAL KITCHEN

SCHAUMBURG, IL

PROJECT HIGHLIGHTS:

Clarion was engaged by a long-term commercial client to address a health-code issue with a failed deli cooler floor servicing an upscale cafeteria. The cooler's deteriorating floor could no longer be sanitized, creating a health compliance risk. The Class A office complex prides itself on its high-end amenities, conveniences, and business-enhancing features. The deli cooler's failed flooring was a threat to the brand of offering high-end commercial spaces and amenities.

Instead of the costly solution of replacing the entire cooler, our Service Division identified a cost-effective alternative: replacing only the flooring with durable diamond plate material. This approach saved the client \$5,000 and kept the amenity online for the building's commercial tenants.

I want to thank you again for the completing the new floor on our walk-in cooler in a remarkable short period. We were under the gun to get this completed for our new deli opening, and your team did a great job.
